## Tip of the Month

### RISK-Adjusted Total of Your Estimate

*Do you want to see quick RISK-Adjusted totals and metrics for your session without creating separate reports or going to the Input/Results Viewer?*

ACE's RISK functions allow you to see RISK-adjusted results in the Point Estimate column. ACE contains 11 RISK functions that calculate various RISK metrics including cost at a specified percentile, mean of the estimate and standard deviation of the estimate, to name a few. RISK functions are typically placed in a separate section in the estimate. Including these rows in your session allows you to quickly compare your Point Estimate and RISK Adjusted results in one view. Having information like this at your fingertips helps you respond to decision maker questions quickly.

The example file "06c – Advanced RISK" shows a summary section that contains various RISK metrics.

## Support Alerts

### JACS Hotfix Now Available!

by ACEIT Support | Oct 19, 2017

**We have exciting news about JACS. There is a new hotfix (7.5-006) available for download. This hotfix is a real breakthrough for JACS and we can't wait for you to work with it. The hotfix significantly improves calculation speed, especially with large schedules!** Engaging improved performance is easy; select the new option "Large File Analysis" on the Analyze dialog.

In addition to the increased speed, other new improvements include:

- Health Check now available as 3 separate reports (DCMA, GAO, and JACS)
- Improved memory management
- Quicker report generation
- Can now import multiple sets of results, e.g., Mean and 65%.

Additional minor items addressed for both MS Project and P6, see the Hotfix notes for more information..

Download the JACS Hotfix from the [Software Patches](#) section.

NOTE: You will need to login and have valid ACEIT DMS to download this Hotfix.
